

Single Leg Squat

Starting position: Standing on your right foot with the left leg extended slightly out in front of you.

Action: Slowly bend the right knee to about 30°, making sure that the knee follows over the line of your toes. Hold for 2 seconds then return to the start position.

These sheets are for guidance only. Although carrying out the exercises on this sheet correctly may be beneficial to you, these sheets do not nor are they intended to replace a proper assessment from your Chartered Physiotherapist. It is advisable that you discuss how to carry out the exercises contained on this sheet with your Physiotherapist at your next session. Should you have any questions regarding the exercises contained on this sheet please feel free to discuss same with your Physiotherapist at your next treatment session.
