

Forward Flexion with Theraband

Starting Position: standing with one end of a theraband in your left hand and the other end under your left foot.

Action: slowly lift your arm out in front of you to shoulder height, keeping the elbow straight. Be careful not to 'hitch' your shoulder blade up towards your ear, or to bend your body sideways.

These sheets are for guidance only. Although carrying out the exercises on this sheet correctly may be beneficial to you, these sheets do not nor are they intended to replace a proper assessment from your Chartered Physiotherapist. It is advisable that you discuss how to carry out the exercises contained on this sheet with your Physiotherapist at your next session. Should you have any questions regarding the exercises contained on this sheet please feel free to discuss same with your Physiotherapist at your next treatment session. The management accepts no responsibility whatsoever for the content or accuracy of these sheets or any issues resulting from same.
